INSTRUCTIONS FOR DISINFECTING YOUR GOLF OR UTILITY VEHICLE

~ Make a solution of ½ cup bleach to 1 gallon of warm water.
Any type will do: laundry, household, cleaning, germicidal etc.

~ Using a sponge or rag, wipe down all “contact areas” including steering wheel, forward and reverse switch, hip restraints or arm rests, scorecard holder and information holder. Include any accessories that may be on the vehicle as well.

~ Do not towel dry, allow to air dry.

~ Lysol, Clorox, Purell and Method brands of disinfectant spray are also highly effective. Again, spray the contact areas thoroughly and allow to air dry.

~ For shared vehicles we recommend Lysol Disinfecting Wet Wipes – A 35 wipe container will fit inside most cup holders.
